Aguilar Ramirez Ian
Armenta Aguilar Adjany
Cetzal Ceme Bryan Emmanuel
Espinosa Mendoza Abraham
Garcia Cetina Daniel

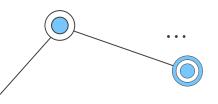

Product summary

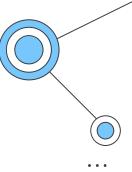

Our project intends that the tasks of the Department of Financial and Material Resources of the Centro de Capacitación para el Trabajo Industrial No. 50 become an automated and simple process through a warehouse management software that allows them to generate periodic reports of inputs and outputs.

Main requirements

Generate good receipt notes

02

Generate a good balance sheet report

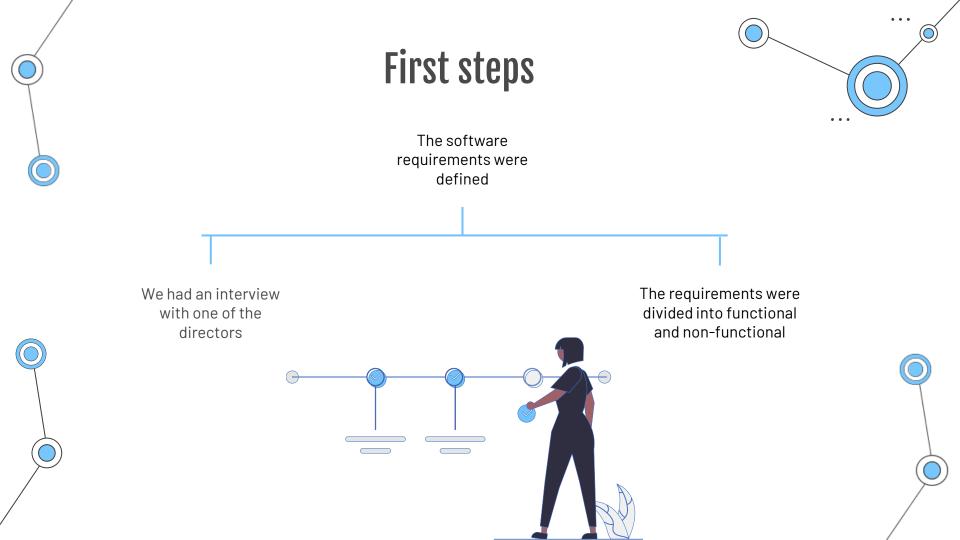

03

Generate stock lists per day

Generate a list of receipts and issues reports

05

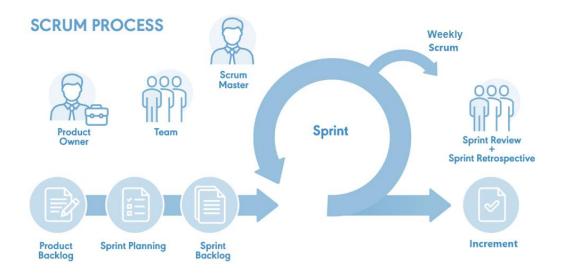

Generate a stock lists per month

Development process

In search of managing progress and activities in an optimal way, the development process of our project is based 80% on the SCRUM framework.

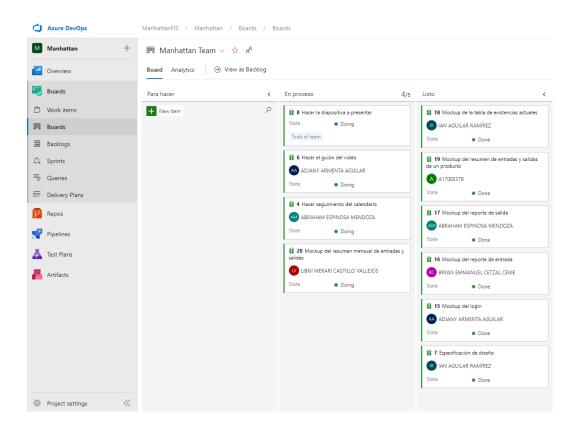

Azure DevOps

We use Azure Boards to help us assign and monitoring tasks.

Project Planning

Development summary

Requirements

Specify the requirements and the use cases of our application

Design

Design the mockups

Implementation

Build the final prototype based on our mockups

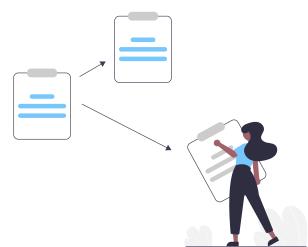

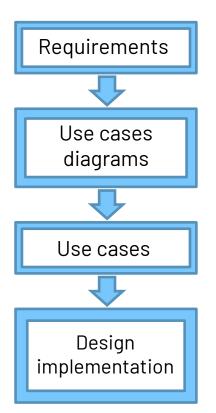

Requirement refinements

Using our requirements document, we specified our use cases.

Each use case was implemented in the mockup prototype

Use case specification

The interactions of the use case with the software is specified

CU-001	Utilizar App Almacen						
Versión		1.	0 (15/11/2021)				
Dependencias							
Precondición	El almacenista ha necesitado utilizar al App Almacen						
Descripción	El sistema deberá comportarse como se describe en el siguiente caso de uso cuando <i>el usuario del almacen requiera utilizar la app</i>						
	Paso	Acción					
	1	El almacenista solicita al sistema ingresar a la app					
	2	El sistema solicita que inicio sesión de una cuenta					
	3	El almacenista registra sus datos y crea una cuenta					
	4	El almacenista ingresa sus datos e inicia sesión					
	5	El almacenista elige una opció del menú					
Secuencia	6	Si se elige la opción de generar vale de entrada,					
Normal		6.1	Se realiza el caso de uso Entrada de Artículo				
	7	Si se elige la opción de generar vale de salida,					
		7.1	Se realiza el caso de uso <i>Generar Vale</i> de Salida				
	8	Si se elige la opción de consultar existencia,					
		8.1	Se realiza el caso de uso Consultar Existencias				
	9	El sistema regresa a la pestaña "menú"					
Postcondición		El almacenista deja de usar la app					
	Paso	Acción					
Exceptiones	9	Si el almacenista cierra sesión,					
		E.1	El sistema regresa a la pestaña "inicio de sesión"				
Comentarios	Las funcionalidades de este caso de uso pueden cambiar en un futuro dependiendo de la empresa que la mantendra en uso						

CU-002		_Ent	trada de Artículo				
Versión	1.0 (15/11/2021)						
Dependencias	1						
Precondición	El almace	enista ha necesitado agregar articulos al almacen					
	El sistema deberá comportarse como se describe en el siguiente						
Descripción	caso de uso cuando el usuario del almacen requiera agregar uno o						
	más articulos						
	Paso	Acción					
	1	El almacenista elige la opción de generar vale de					
		entrada					
	2	El sistema abre la pestaña "vale de entrada"					
Secuencia	3	El almacenista rellena el formulario con los datos					
Normal		solicitados					
	4	El almacenista selecciona la opción de guardar					
	5	El sistema guarda el documento generado en el					
		dispositivo					
	6	El sistema recarga la pestaña con el formulario en					
		blanco					
Postcondición	El a	lmacenista ha agregado articulos al almacen					
Excepciones	Paso		Acción				
	4	Si el almacenista selecciona la opción de cancelar					
		F.1	El sistema regresa a la pestaña				
		L.1	"menú"				
Comentarios	Las funcionalidades de este caso de uso pueden cambiar en un						
	futuro dependiendo de la empresa que la mantendra en uso						

CU-003	Generar Vale de Salida					
Versión	1.0 (15/11/2021)					
Dependencias						
Precondición	El almacenista ha necesitado eliminar articulos al almacen					
	El sistema deberá comportarse como se describe en el siguiente					
Descripción	caso de uso cuando el usuario del almacen requiera ver uno o más					
	articulos					
	Paso	Acción				
	1	El almacenista elige la opción de generar vale de				
	1	salida				
	2	El sistema abre la pestaña "vale de salida"				
Secuencia	3	El almaceni	sta rellena el formulario con los datos			
Normal	3	solicitados				
Normal	4	El almacenista selecciona la opción de guardar				
	5	El sistema guarda el documento generado en el				
	,	dispositivo				
	6	El sistema recarga la pestaña con el formulario en				
	6	blanco				
Postcondición	El a	almacenista ha eliminado articulos al almacen				
	Paso	Acción				
Excepciones	4	Si el almace	nista selecciona la opción de cancelar,			
Exceptiones		E.1	El sistema regresa a la pestaña			
			"menú"			
Comentarios	Las funcionalidades de este caso de uso pueden cambiar en un					
Comentarios	futuro dependiendo de la empresa que la mantendra en uso					
CU-004		Consultar Existencias				
Versión	1.0 (15/11/2021)					
Dependencias	1.0 (13/11/2021)					
Precondición	El almacenista ha necesitado ver los articulos del almacen					
Descripción		sistema deberá comportarse como se describe en el siguiente				
	Paso					
		El almacenista elige la opción de consultar				
	1	existencias				
	2					
Secuencia		El sistema abre la pestaña "existencias" El almacenista observa las existencias de articulos en el almacen				
Normal	3					
	4	El almacenista termina la consulta				
	5	El almacenista selecciona la opción menú				
	6	El sistema abre la pestaña "menú"				
Postcondición	El almacenista ha eliminado articulos al almacen					
Excepciones						
Comentarios	Las funcionalidades de este caso de uso pueden cambiar en un					

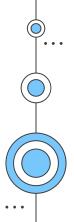

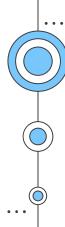

Design

We make the design according to the requirements and artifacts; the parameters were agreed, and we started the elaboration.

We used Figma, for the design and creation of the prototype

Login

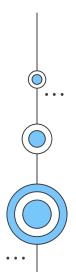

Iniciar sesión

Registrar nueva cuenta

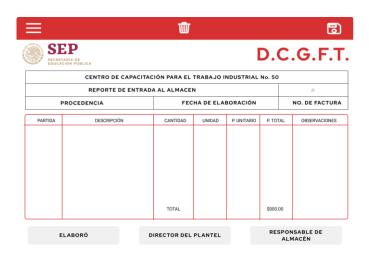

Requirement:

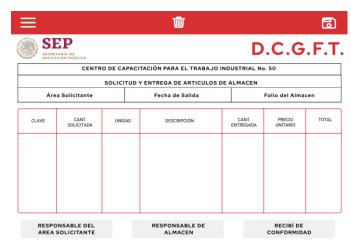

Access to the system must be controlled and will only be for permitted users.

Product input and output

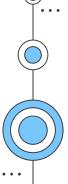

Requirement

The software must be able to generate an entrance ticket

Requirement

The software must be able to generate an output ticket

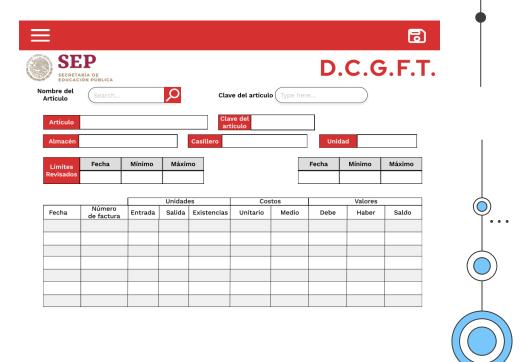

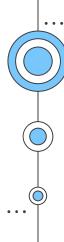

General summary of a specific product

Requirement:

The software must be able to output a general summary of inputs and outputs for a specific product.

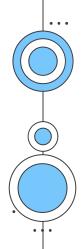

Pop-up windows

Design of the emergent responses to some of the functionalities for the user.

Usability

For the usability of the user, worldwide recognized icons were implemented in the design.

Labels were used for the icons that are not common to make the function known to the user.

Entrada de Articulos

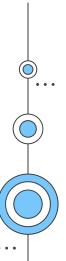

Consultar Existencias

Generar vale de Salida

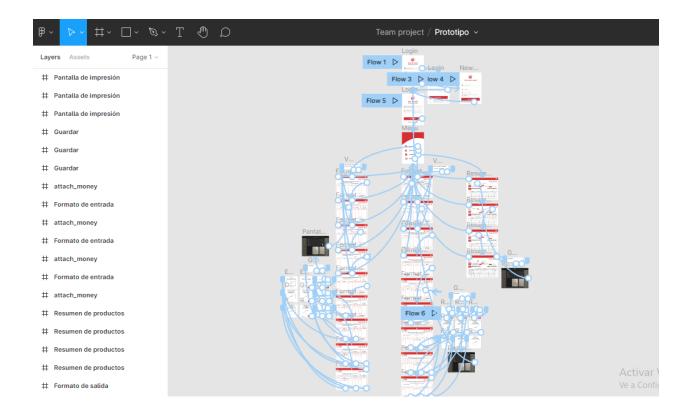

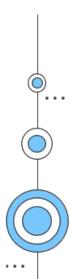

Cerrar Sesión

Implementation

Testing

We carried out the prototype tests with the help of the warehouse manager of the CECATI 50, we made sure that it complied with the previously established requirements. The functionality was as expected.

One click test

For this test, some people were shown the prototype and asked to do certain actions within it, the results were correct, there were no complications. Thanks to the usability of the icons, it didn't take much time to understand how the prototype works

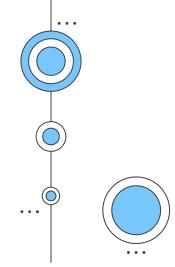

5 second test

In the test, the people to whom it was applied mentioned that they felt comfortable, and it was pleasant. The color palette respected the main color of the CECATI 50. They liked the order of things and commented that it was formal.

Generic Proficiencies

Work with ICT for professional interventions in a responsible way

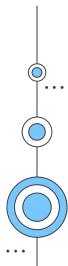

Take decisions in their professional and private practice in a responsible manner

Azure DevOps

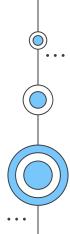

Specific Proficiencies

Identifying the concepts related to the stage of requirements, design, implementation, testing and maintenance according to this discipline.

Identifying the human factors immersed in the software environment

Our Contribution Tracker

Contribution tracker - Manhattan - Sprint 3							
Accountables	A Total	ssigned activities Complete	Team mettings attended and mettings with the mentor	Scale personal	Final grade		
Aguilar Ramirez Ian	4	4	7	100%	20.00%		
Armenta Aguilar Adjany	4	4	7	100%	20.00%		
Cetzal Ceme Bryan Emmanuel	4	4	7	100%	20.00%		
Espinosa Mendoza Abraham	4	4	7	100%	20.00%		
Garcia Cetina Daniel	3	3	7	100%	20.00%		

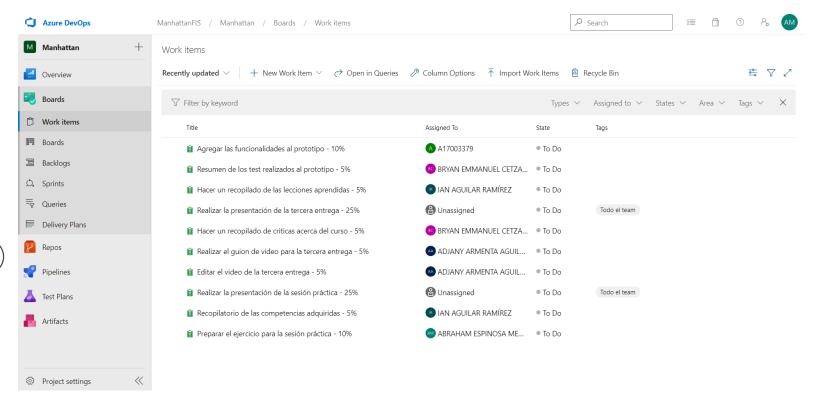

Total mettings: 7

At the end of the sprint, each member is expected to contribute 16.67%

Calculus: ((Activities total / activities complete) * 90%) + ((Team mettings attended / total mettings) * 10%)

Value of each task

Lessons Learned

Related concepts of the creation of prototypes such as kits in UI and how to implement them in the development stage

Creation of high-fidelity interactives prototypes in Figma

Working with GitHub and Figma in general

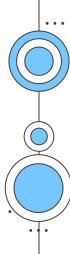

Creation of use cases templates and use cases diagrams

How to manage the progress of a project and how to get the teamwork motivated

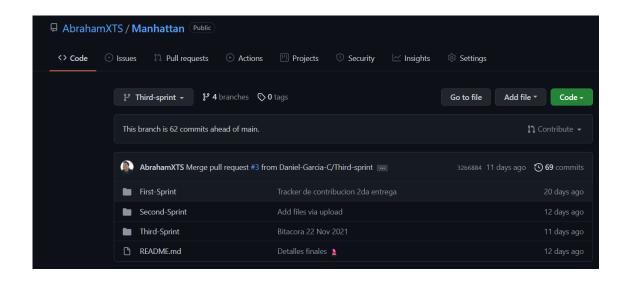

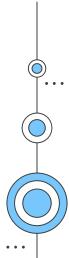

GitHub repository

Forks were created for each team member
We created a new branch for the changes of third sprint
And merge a branch Master

Thanks!
